Organization: CCAOI

Submission ID: 69 supplement

Dear Ms. Cooper,

Further to our submission (Submission 69) we wish to add the following points.

In addition to our response on Root Zone Maintainer in Question 6, we wish to add, as the Root Zone Maintainer has a critical role to play for the security, stability and resilience of the DNS System, the transition of the Root Zone Maintainer should therefore be considered one of the necessary conditions to ensue the completeness of the ICG proposal. We believe, any change in the root zone content or environment should be carried out by the global multistakeholder community with utmost transparency and accountability, therefore the Root Zone Maintainer should be appointed through an open, fair, transparent and accountable tender process.

Also, in continuation to our response to NTIA's concern of government capture of IANA functions in Question 9, we wish to add that while safeguards have been defined to ensure ICANN is not captured by any government or government led organization, it is equally important to initiate further discussion on the issues of jurisdiction, especially since in the current scenario, being subjected to the laws of a specific nation may leave ICANN and PTI open to some level of indirect government control.

Thanking you and looking forward to favorable consideration of suggestions in the interest of growth of internet in the country.

Yours very truly,

for CCAOI
